

ABOUT RELIANT

Connecting, Securing & Enriching Retail Stores

It's not easy to manage retail store technology in an era in which the Internet is everywhere, mobile initiatives to engage customers are a top priority and hackers are preying upon your vulnerabilities. You are consistently pressured to improve store connectivity, security and application functionality to better serve your customers. Simultaneously, you have competing priorities to control IT spending while enhancing the shopping experience in your stores. Through it all one thing becomes clear: your job of acquiring, deploying and supporting 21st century in-store applications is becoming much harder.

Reliant transforms IT's approach to delivering and supporting store systems, by allowing retailers to create an in-store private cloud. This allows a wide range of application, systems and network configurations to be centrally delivered, managed and maintained, reducing ongoing support costs and eliminating the need for additional equipment to run each application. This highly flexible and secure architecture enables retail executives to keep pace with the 21st century customer-engaging applications.

Network security and retail systems are core competencies that are part of our DNA. The result is a secure, cost-effective alternative to traditional store systems and security solutions. Our clients include many of the world's foremost global retail brands in the specialty retail, luxury, restaurant and convenience store industries.

Our management team consists of leaders in the fields of networking, PCI compliance, POS and payment technology. In addition to our patented Redbox Platform, which is designed for merchants with multi-site retail locations, we offer consulting services and a managed services program.

Reliant addresses security, networking and in-store computing on a holistic basis to allow you to reduce the cost and risk of delivering customer-engaging technologies in your stores.

REDBOX PLATFORM

Reliant's patented Redbox Platform, the in-store private cloud for convenience, retail and restaurant store chains, provides a comprehensive data security suite (PCI), powerful network infrastructure and an open platform to host a wide variety of in-store retail applications that add value to the customer experience. Our Redbox Platform cost-effectively delivers VoIP, Digital Signage, Interactive Kiosk, DVR, Guest Wifi, Payment Applications, Music and more from one centrally managed, locally

“ Reliant helped us assess our all-store environment, working closely with our team to ensure that we have met all security requirements. As we implement our new high-speed network, the Redbox Platform will help us to remain PCI compliant and also provide an appliance platform that can be leveraged for additional customer-centric services. Our focus with the Redbox Platform going forward is to further improve our customers' shopping experience. ”

-Gary MacRae, Senior Vice President and CIO, Hudson News

Benefits to the Retail Merchant

- Holistic approach to networking, security and in-store applications
- Consolidate different network, security, infrastructure and application functions in a single, virtualized, in-store hosting platform
- Simple, less expensive approach to deploy high-value applications in store
- Single solution to ensure PCI compliance across the enterprise

hosted appliance. Redbox Platform configurations and software updates are managed centrally from the corporate office through Redbox Platform Manager.

At the heart of Redbox Platform is Reliant's patented, virtualized security architecture, providing comprehensive protection against data-security threats. The Redbox Platform includes the necessary security controls for the store environment to meet all of the technical requirements of the PCI DSS, ensuring you a swift and successful audit.

MANAGED SERVICES

Your compliance status is only as good as your ability to demonstrate that security controls are operating effectively. Reliant offers infrastructure and security services to manage installations of our patented Redbox Platform. The Managed Services Program is based on ensuring compliance with the ongoing PCI DSS control objectives and is facilitated through the use of the Redbox Platform. We manage all aspects of the platform, including its health, status and ongoing maintenance, and review and resolve security events and alerts.

NETWORK SECURITY ASSESSMENT

Our professional consulting services identify and prevent threats to your retail environment. The scope of the analysis may include corporate offices, store locations, e-commerce and catalog environments. We will assess your information security posture and gaps in compliance, as well as the network infrastructure, system components, card-processing applications, business processes and operational personnel supporting the management of cardholder data.

Our Commitment to Innovation

Reliant addresses security, networking and in-store computing on a holistic basis to allow you to reduce the cost and risk of delivering customer-engaging technologies in your stores. Redbox Platform's innovative design allows you, for the first time, to consolidate a wide range of different network, security, infrastructure and application functions in a single low-cost appliance.

Our active participation on the PCI Security Standards Council is central to our PCI commitment. This focus is what allows us to maintain our solutions at the forefront of PCI Regulations. As a result, we keep you ahead of the continuing changes and demands of PCI compliance.
